Data Science · Machine Learning · Python · SQL · NLP · Flask

PROFESSIONAL SUMMARY

Results-driven CS undergraduate (Data Science, CGPA **8.78/10**) with proven experience delivering **15% accuracy gains** and **25% faster data pipelines** across ML and analytics projects. Skilled in building end-to-end machine learning solutions — from raw data preprocessing to model deployment. Seeking a **Data Science / ML role** at a top MNC to drive measurable business impact through data.

EDUCATION

B.Tech — Computer Science Engineering (Data Science) 2023 – 2027
Vignana Bharathi Institute of Technology, Ghatkesar, Telangana **CGPA: 8.78 / 10 (Top 10% of batch)**

EXPERIENCE

Data Science Intern — *InternStudio, Remote* May 2025

- Forecasted **COVID-19 trends** on **10,000+ time-series records** (Python, Pandas) — automated trend detection, eliminating hours of manual analysis per sprint.
- Raised model accuracy by 15%** (MAE & RMSE) via feature engineering, hyperparameter tuning, and regression optimization using Scikit-learn.
- Strengthened model reliability** with 5-fold cross-validation — cut overfitting risk and ensured consistent generalization on unseen data.
- Streamlined team collaboration** using Git version control — zero merge conflicts, faster iteration cycles across the full project lifecycle.

PROJECTS

Early Glaucoma Diagnosis Using Quantum AI 2026
Python · Machine Learning · Quantum-Inspired Optimization · Image Processing

- Built an **automated retinal image classification pipeline** — ML-based preprocessing and feature extraction reduced diagnostic turnaround and improved early-detection accuracy.
- Applied **quantum-inspired optimization** to surpass standard ML classification baselines, advancing research-grade medical AI.
- Architected a **modular, dataset-agnostic pipeline** — new datasets onboarded without touching core logic, enabling future scalability.

Smart Aadhaar Data Analysis 2026
Python · SQL · Anomaly Detection · Statistical Thresholding

- Built a **statistical anomaly detection engine** to identify duplicate and inconsistent records in government-scale structured datasets — directly improving data integrity.
- Reduced data processing time by 25%** by replacing ad-hoc scripts with reusable, modular aggregation and filtering pipelines.
- Delivered **scalable validation logic** cutting manual QA effort and boosting downstream analytical reliability.

AI Chatbot — NLP-Powered Conversational Agent 2025
Python · NLP · Similarity-Based Retrieval · Flask

- Developed **NLP-driven similarity retrieval** — outperformed keyword-matching baselines in contextual response accuracy across test conversations.
- Engineered a **Flask backend** handling concurrent requests efficiently — reduced latency through optimized pipeline architecture and modular request routing.
- Designed for **zero-disruption extensibility** — new intent categories plugged in without breaking existing workflow logic.

TECHNICAL SKILLS

Languages	Python, C++, SQL
ML & Data Science	Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Feature Engineering, Hyperparameter Tuning, Cross-Validation, Model Evaluation, Time-Series Forecasting, Anomaly Detection
NLP	Text Preprocessing, Similarity-Based Retrieval, Conversational AI
Web & Databases	Flask, MySQL, PostgreSQL
Practices & Tools	OOP, Data Structures & Algorithms, Modular Programming, Git, GitHub, Jupyter Notebook, Debugging

HIGHLIGHTS

- 15% model accuracy improvement
- 25% faster data processing
- 10,000+ records analyzed
- 3 end-to-end ML projects shipped
- 5-fold cross-validation implemented
- CGPA **8.78/10** — Top 10% of batch
